

# Retrieving Data

Lets send a GET request to retrieve all audits conducted in your organisation.

```
curl --header "Authorization: JWT XXXXXX123"  
https://api.auditcomply.com/audits
```

An example response for the previous curl command will be something similar to below (several fields have been hidden):

```
{  
  "count": 54,  
  "next": "https://api.auditcomply.com/audits/?page=2",  
  "previous": null,  
  "results": [  
    {  
      "name": "Audit Comply Example Assessment - [v1]",  
      "id": 1,  
      "status": "NA",  
      ...,  
      "observations": [  
        {  
          "question_id": 1,  
          "question_text": "Do you conduct paper based  
audits?",  
          "requirement_identifier": "1.1",  
          "nonconformances": [  
            {  
              "nonconformance_id": 1,  
              "status": "OPEN",  
              ...  
            }  
          ]  
        }  
      ]  
    }  
  ]  
}
```

```
    ],
    "custom_responses": [],
    "observation": "",
    "responses": [
        "NA"
    ]
},
...
]
},
...
]
}
```
