

Numeric Input

Additional input fields can now be set as **numerical input fields**. This means that when conducting the audit on the iPad, the **numerical keyboard** will automatically appear, making data **entry faster** and preventing users from entering **invalid data** on both iPad and Desktop.

1. In the **Template Builder** select **"Add Input Field"**.
2. In the **Dropdown** Select **"Number"**.
3. Enter in a **Name** for the Field.
4. If you want to make the **field mandatory**, click the **checkbox** next to the **"Mandatory"**.
5. Select **"Save Input"**.
6. **Publish** the Template. On a **Requirement** in the template builder

You now have a **number only input field** and on the iPad this will trigger the **numerical keyboard** to appear once the box is selected.
